

# Internet service access by satellite

With **i-sat**, Internet Point offers you a service of bidirectional internet access by satellite with high data flow.

Hence'forth, everywhere in Europe \*, in North Africa and in the Middle East, you can have the high data flow on Internet at a lower cost. You need no more telephone line or cable to be 24 hours connected for a fixed monthly amount.

Satellite coverage i-sat

Specially expected for regions not covered by the cable or by the ADSL, **i-sat** is the best solution to have a fast, reliable and permanent internet access.

With **i-sat**, to reach the Internet high data flow becomes a new possibility for thousands of companies.

A simple outside antenna, and an internal box are enough for establishing your connection in the Internet.

### ***i-sat* is a system which proposes you:**

- A high-quality alternative to the corded access ,
- A continuous 24 hours connexion in fixed cost,
- A connection without telephone line,
- Possibilities of virtual private networks via satellite,
- Solutions of audiovisual broadcasting contents in multicast,
- The guarantee of the perpetuity by the use of normalized products DVB / RCS.

## Internet Point

Access provider since 1996, we launched various services of access by classic telephone lines and ADSL, we propose today, a new service of access by bidirectional satellite.

\* In several countries, you might need a licence

To give you the internet access to high data flow everywhere,  
Where you wish it

It is possible with the satellite,  
It is available with **i-sat**.
